IQZ SYSTEMS

Pega Decisioning Consultant – Investment Targeting -Primerica Insurance

Tamil Nadu, IN

Sept 2024 – Present

Project Description:

Developed a strategic investment targeting solution in Pega Customer Decision Hub (CDH) to help Primerica Insurance agents identify the top 10 customers most likely to invest. The solution uses interim PMML predictive models until Adaptive Decisioning (ADM) learning matures, combining real-time decisioning, Gen AI-driven insights, and personalized recommendations within the Sales Automation portal.

Roles and Responsibilities:

- Designed the high-level architecture, including ruleset layering, application structure, and integration of new components into existing CDH systems.
- Automated the creation of weekly
- Built and implemented the Top 10 Investment Leads Prediction model using PMML for ranking and ADM shadow learning for validation.
- Automated action and treatment creation using Publisher by configuring reusable strategies to support weekly releases without additional development effort.
- Configured Queue Processors, Job Schedulers, and REST APIs to support efficient data flow and real-time decisioning.
- Enhanced the Pega Gen AI Coach to generate pre- and post-meeting insights, integrating Zoom and Microsoft Teams through proof-of-concept (POC) implementations.
- Conducted ABN experiment testing with detailed analysis in Visual Business Director (VBD) and used Impact Analyzer and Scenario Planner to identify and resolve key business pain points.
- Delivered Hot Leads and Opportunity Insights capabilities in the Sales Automation App, enabling agents to act on high-value prospects.
- Upgraded Next-Best-Action (NBA) strategies and optimized customer journeys using Journey Visualizer to improve traceability and business outcomes.
- Developed a video recommendation system leveraging browser behavior data and Adaptive Decisioning (ADM) to reduce the cold-start problem and enhance personalization accuracy.
- Utilized Tealium data for end-to-end testing, real-time interaction aggregates in Interaction Summaries, and behavior-based personalization.
- Partnered with UI/UX teams to make recommendations and insights more intuitive and actionable within the agent portal.
- Improved Interaction History (IH) summaries and strategy designs to strengthen decision accuracy and campaign performance.
- Conducted performance analysis using PDC, ensuring scalability, efficiency, and optimized system throughput.
- Mentored peers, presented POCs, and contributed to design discussions and R&D for continuous improvement of decisioning frameworks.

ARETEANS

Pega Decisioning Consultant – Standard Chartered Bank (HK)

Tamil Nadu, IN

Nov 2023 - Sept 2024

Project Description:

RTIMHK is a marketing service application for Standard Chartered Bank, designed to target customers through various channels. The project involves creating actions and treatments based on business engagement eligibility criteria using CDH portal and NBA Designer. Offers are launched for both inbound and outbound channels, including the real time event offers after User Acceptance Testing.

Roles and Responsibilities:

- Implemented data jobs to update datasets from external files.
- Configured strategies to optimize sales offers and enhance customer decision-making.
- Set up contact policies and configured actions and treatments in CDH.
- Creating and debugging strategies and decisioning rules like when rule, decision data, proposition filters, etc.

- Understanding of ML Models and Real time event strategies.
- Configured outbound schedules, Segments, running outbound offers.
- Conducted strategy testing and debugging with Tracer, Clipboard.
- Testing the inbound/outbound offers using request JSON using postman.

TATA CONSULTANCY SERVICES
Decisioning Consultant – CitiBank

Tamil Nadu, IN Pega
Sep 2021 – Nov 2023

Project Description:

Sales offer Management (SOM) is part of Citi Credit cards – Marketing & Services where the primary role is to target customers through various channels with product offers using a 1:1 customer relationship engagement Paradigm. SOM provides discrete services to various issues & groups of marketing by addressing with latest AI Models. Using strategies for sending the Offers/Actions as per the business requirements which deals with both Account and Customer Level. SOM also uses Pega CDH OpsManager Overlay application, to create a new action and update existing action.

Roles and Responsibilities:

- Designed and implemented solutions for automated data import of millions of customer/Account data, ensuring efficient data load into DB
- Configuring REST service endpoints to enable seamless integration with external systems.
- Created actions through the NBA Designer and BOE environment.
- Creating file templates and implementing them in offer flows, to export NBA actions for household Use case.
- Conducted strategy testing and debugging with Tracer, Clipboard and log files.
- Configured Dataflows and datasets for managing strategies and flows.
- Employed Unix scripting for server-side querying and script creation with Tectia.
- Conducted Performance testing with Soap UI with JSON requests.
