

Gopinath
Senior System Architect

Name: Gopi

Contact No: +91-9704723931

Email: gopinath32.konduru@gmail.com

Professional Summary:

- ☐ Having 4.8 years of IT experience in Analysis, Design, Development, and Maintenance of BPM applications using PEGA Rules Process Commander.
- ☐ As a Senior System Architect, I took a pivotal role in designing, developing, and implementing cutting-edge enterprise-level solutions powered by PEGA platform technologies.
- ☐ Having good knowledge of Pega Robotics Studio to create automation scripts, handle workflows, and improve business processes.
- ☐ Played a pivotal role in all aspects of the software development process, well-versed in software methodologies like Agile and Scrum.
- ☐ Collaborated with stakeholders, business analysts, and development teams to gather and analyze requirements, craft scalable solutions, and deliver technical leadership across all stages of the software development lifecycle.
- ☐ Expertise in developing and configuring Connect-REST and Service- REST rules to enable communication between Pega applications and external services.
- ☐ Implemented background processing rules (Job Scheduler and Queue Processor).
- ☐ Expertise in setting up rule Delegation to empower business users to modify specific rules directly, enhancing flexibility and reducing dependency on IT for rule changes.
- ☐ Troubleshoot technical challenges and deliver actionable recommendations to enhance system performance and optimize overall efficiency.
- ☐ Having good knowledge on Constellation, using DX APIs to deliver intuitive, responsive interfaces that greatly improve user experience and simplify data entry tasks.
- ☐ Skilled in advanced features such as Pega Gen AI to automate application component generation.
- ☐ Good knowledge in Customer Decision Hub (CDH), Next-Best-Action (NBA), Case Management and all integration aspects.
- ☐ Defined and managed Business Issues and Groups to organize and optimize Decisioning processes in Pega Customer Decision Hub.

Key Skill:

Operating Systems	Windows
Technologies / Tools	Pega V7.x, Pega V8.x
Databases	PostgreSQL

Certifications:

- ☐ Certified Pega Senior System Architect (CSSA)
- ☐ Certified Pega Robotic System Architect (CPRSA)
- ☐ Certified Pega Decisioning Consultant (CPDC)

Work History:

- ☐ Religent Systems Pvt. Ltd | Senior Software Engineer| Hyderabad, India | March 2021 to October 2025.

Project Summary:

Project Name	GO2 (Global Onboarding and Orchestration)
Client	AMEX
Role	Senior System Architect - Offshore
Environment	Pega 7.4 , 8.6

Project Description:

Amex is a leading banking organization that provides the various banking options like Credit cards, loans to customers.

Global Onboarding and Orchestration is an Application that automates the credit cards and loan process with various case types for each country in the world.

Responsibilities:

- ☐ Architect and develop sophisticated PEGA applications, encompassing case management, data modeling, user interface design, and seamless integration with external systems.
- ☐ Analyzing business requirements, participating in the design discussions with team and provides some necessary inputs to the user stories.
- ☐ Work closely with cross-functional teams to seamlessly integrate PEGA applications with existing enterprise systems and third-party solutions.
- ☐ Worked on integrations to fetch the data from external system.
- ☐ Created Activities/Data Transform rules for implementing core Business logic. Develop new, and rewrite current, workflow configurations to meet the business requirements.
- ☐ Involved in analyzing and fixing the defect.
- ☐ Creation of Validation rules and Edit Validate rules as per business requirements to validate the fields.
- ☐ Involved in creating a new Advanced Agent Activity to expire card product details for declining applications daily based on business requirements.
- ☐ Worked on Savable data pages.
- ☐ Created Queue Processor as per the business requirement.
- ☐ Created Job Scheduler for reporting purpose.
- ☐ Involved in Agile Meetings.

- ☐ Provided support to QA team to fix bugs and production issues.
- ☐ Coordinated with Multiple teams for any dependencies on user story / defects.
- ☐ Created Low-Level Designs (LLDs), Unit test Document, and Rule Inventories for all assigned user stories.

Project Summary:

Project Name	SORTS
Client	NSW
Role	Senior System Architect – Offshore
Environment	Pega 8.3

Project Description:

SORTS is built on Pega rules to help the sheriff officers of New south wales(Australia) state to create, track, and close out the execution and service activities conducted by the sheriff's office. It facilitates manual case creation as well as automatic case generation through file feeds from court systems and service calls. Additionally, SORTS includes a payment portal for citizens to settle fines and penalties related to their cases.

Responsibilities:

- ☐ Requirement analysis, participating in the design discussions with team and provides some necessary inputs to the user stories.
- ☐ Involved in creating field values for the UI labels.
- ☐ Worked in Activities, Report definitions and Data transforms
- ☐ Developed Decision rules like Decision Table, Decision Tree and When Conditions.
- ☐ Worked on Data Transform rule for the requirements.
- ☐ Coordinated with Other teams for any dependencies on user story / defects.
- ☐ Provided support to QA team to fix bugs and production issues.
- ☐ Prepared Different artifacts for user stories like Design Document, Rules log, Unit test cases.

Project Summary:

Project Name	Docs Verification
Client	Bank of America
Role	System Architect – Offshore
Environment	Pega 8.3

Project Description:

Developed a Pega application to streamline the account opening process by automating the verification and storage of documents submitted by customers. This application handles the verification of documents provided by applicants through email or physical submission at branches. Cases are created and categorized as CSR or Proprietary, with documents securely stored in Amazon S3 upon successful verification.

Inefficient Manual Document Verification: The manual process for verifying and storing documents during account opening was time-consuming and prone to errors, causing delays and potential compliance issues. Automated Document Verification Implemented a Pega-based automated solution that initiates document verification upon receipt, categorizes cases, verifies documents, and securely stores them in Amazon S3, significantly reducing processing time and errors.

Responsibilities:

- ☐ Working with the Business users, Leads, and Business Analysts to define business requirements for designing, testing, and building Pega systems solutions to meet those requirements.
- ☐ Experience in Sections based on the user selections, Sections contained Dropdown, radio buttons, etc.
- ☐ Troubleshoot technical challenges and deliver actionable recommendations to enhance system performance and optimize overall efficiency.
- ☐ Created work objects dynamically using File Listener.
- ☐ Analyze and prepare the elaboration documents for the use cases.
- ☐ Creation of Declarative expressions for value change on the properties.
- ☐ Performed Unit Testing and scheduling the daily status report.
- ☐ Involved in designing and managing correspondence templates to standardize communication and maintain consistency in automated messaging.
- ☐ Skilled in defining assignment rules to automatically route work to the appropriate users or teams based on business logic and workload management.
- ☐ Analyzed and resolved Production defects to improve system functionality and performance.
